NOTICE: These bulbs are warranted for two years. Do not use with dimmers, electronic timers or photocell devices. Suitable for indoor or outdoor use, but outdoor use requires an enclosed fixture. Install and remove lamp by grasping plastic base; do not grip and twist glass.

USE THESE LONG LASTING BULBS

Will Installing My Compact Fluorescent Lights (CFL) Make A Difference?

Yes! Switching from traditional light bulbs to CFLs is an effective, accessible change every American can make right now to reduce energy use at home and prevent greenhouse gas emissions that contribute to global climate change. Lighting accounts for close to 20 percent of the average home's electric bill.

Where to Use CFLs?

CFLs provide the greatest savings in fixtures that are on for a substantial amount of time each day. At a minimum, ENERGY STAR recommends installing qualified CFLs in fixtures that are used at least 15 minutes at a time or several hours per day. The best fixtures to use qualified CFLs in are usually found in the following areas of your home: family and living rooms, kitchen, dining room, bedrooms, and outdoor covered fixtures.

Should I Wait Till My Light Burns Out To Install These CFLs?

No. Replacing incandescent bulbs with CFLs right away, rather than waiting until incandescents burn out is beneficial because you can begin to enjoy the energy savings right away.

You can save the incandescent bulbs for your fixtures where CFLs aren't suitable like in a closet where the light would only be on for a few minutes at a time, or for a dimmable fixture if you don't have a dimmable CFL.

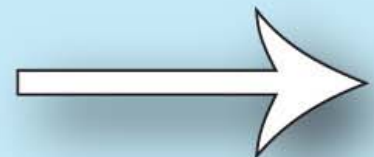

How To Dispose of CFL

CFL Bulbs contain Mercury and should not be thrown away in the trash. Please dispose of them by taking CFLs to Burbank Recycle Center (818-238-3900) or any Household Hazardous Waste roundup (1-888-CLEAN LA). More information regarding mercury in CFLs, including what do if a bulb breaks, can be found at our website: BurbankWaterandPower.com

USE THESE LONG LASTING AERATORS

We are facing a serious water supply shortage in Burbank and your help is needed. BWP is asking every resident in Burbank to get in the habit of using less water and commit to reducing their daily water consumption by 20 gallons. Here are two aerators to help you reach that goal.

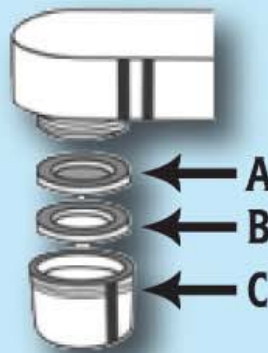

Faucet Aerators:

- Aerators control and reduce water flow to 1.0 Gallon Per Minute (GPM) compared to more typical 2.5 GPM.
- Aerators reduce flow, but maintain the appearance of more water by breaking up the water into smaller particles and adding air into the water stream.
- Dual-thread design will fit male and female pipe end applications.
- Aerators may collect debris which can easily be cleaned. Simply unscrew aerator and rinse it out.

Installation Instructions

For **INSIDE** threaded faucets:

1. Remove old aerator.
2. Place upper thicker washer (A) on lower thinner washer (B) on top of aerator (C).
3. Screw new aerator into inside threads of faucet using finger pressure only.

For **OUTSIDE** threaded faucets:

1. Remove old aerator.
2. Discard upper thicker washer (A).
3. With lower thinner washer (B) on top of aerator (C), screw onto outside threads using finger pressure only.
