CHROMIUM TESTING

SAMPLING EVENT OF February 9, 2009

The City Council requested that total chromium and chromium 6 test results be obtained for various public buildings in Burbank. Samples were collected on February 9, 2009. MWH Laboratories analyzed the samples and the results are shown below. The minimum detection limit used for total chromium under test method EPA 200.8 is 1 ppb; EPA test method 218.6 for chromium 6 uses a detection limit of 1 ppb.

The California Department of Public Health maximum contaminant level (MCL) for total chromium is 50 parts per billion (ppb). Total chromium is the sum of chromium 3 and chromium 6. There is no MCL for chromium 6 at this time.
